

## KB TYPE – FEATURES

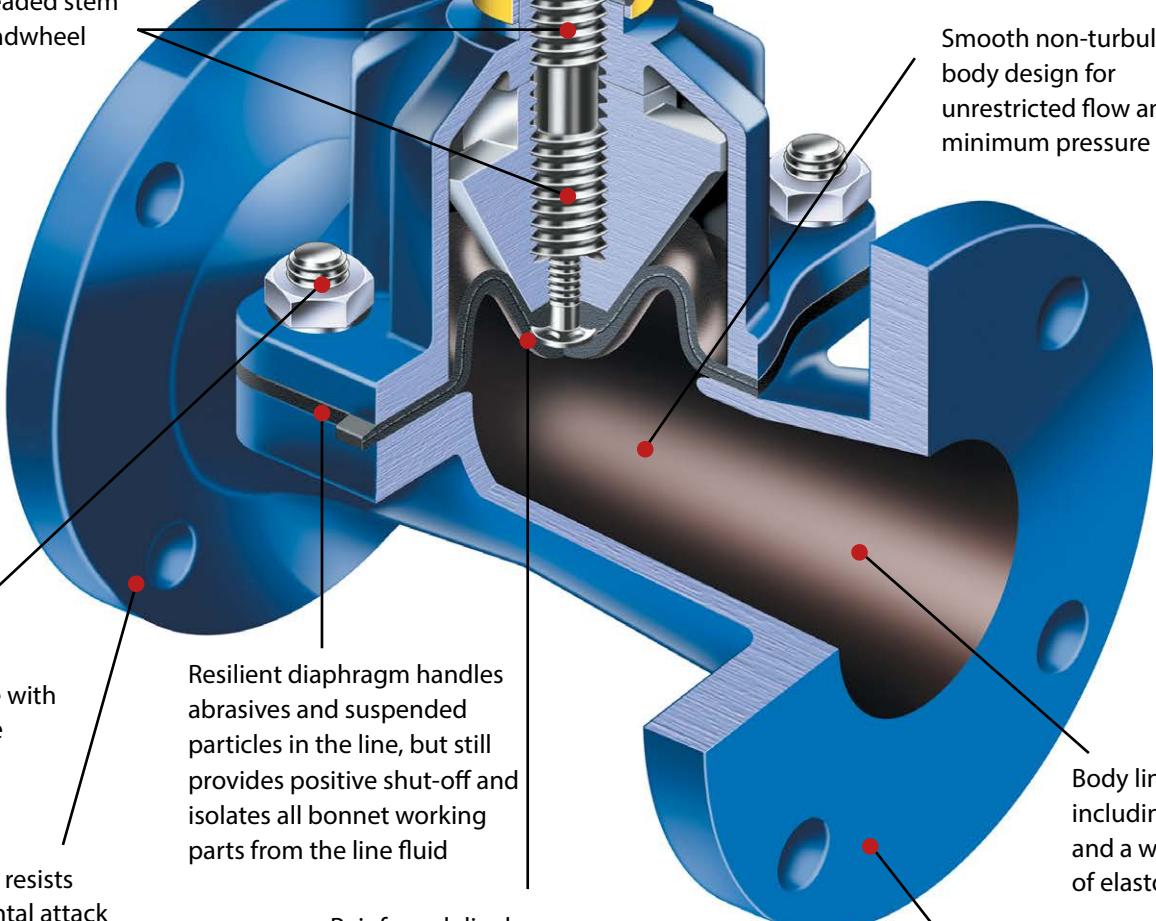

### Saunders® KB Design

Hand wheel sized for comfortable grip and easy operation

Lubricated for life, and protected from dust, dirt and atmospheric contaminants

Double threaded stem reduces handwheel turns

Diaphragm replaceable with valve in line

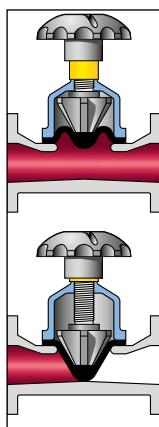

Resilient diaphragm handles abrasives and suspended particles in the line, but still provides positive shut-off and isolates all bonnet working parts from the line fluid

Paint finish resists environmental attack

Reinforced diaphragms give long life and leak-free operation

Yellow valve indicator provides visual indication of the position of the valve

Smooth non-turbulent body design for unrestricted flow and minimum pressure drop

Body lining including glass and a wide range of elastomers

Screwed and flanged options in a wide range of body materials

**Saunders® KB and K type (higher flow) valves:  
the choice for corrosive slurry applications**

## KB TYPE – STANDARDS

### Top Works

- Manual
- Actuated

### Diaphragm

- Rubber

### Body

- Flanged and screwed design
- Lined and unlined
- Cast iron, SG iron, cast steel, stainless steel or gunmetal

As well as meeting the overall lengths specified in EN 558-1 Series 1, Series 7\* and MSS SP-88, Saunders<sup>®</sup> valves are manufactured to the following standards:

Flanged	
<b>American</b>	ASME B16.1 Class 125
	ASME B16.24 Class 150
	ASME B16.5 Class 150
<b>British</b>	BS 10 Tables D and E
<b>British/European<sup>1</sup></b>	BS EN 1092-1 PN10/16
	BS EN 1092-2 PN10/16
	BS EN 1092-3 PN10/16
<b>Japanese</b>	JIS B 2220 10K
	JIS B 2239 10K
	JIS B 2240 10K

<sup>1</sup> Replaces BS 4504 PN10/16

Screwed	
<b>American<sup>2</sup></b>	ASME B1.20.1
<b>British/European<sup>3</sup></b>	BS EN 10226-1 Parallel
	BS EN 10226-1 Taper
<b>European<sup>4</sup></b>	EN ISO 228-1
	ISO 7-1 Parallel
<b>International</b>	ISO 7-1 Taper

<sup>2</sup> Replaces ANSI 2.1

<sup>3</sup> Replaces BS 21 Parallel and Taper

<sup>4</sup> Replaces DIN 259

\* Series 7 is the original IDV standard from when PK Saunders invented the diaphragm valve.

## KB TYPE – BODY

### Lined and Unlined Options

Saunders<sup>®</sup> full bore KB type diaphragm valves, with their smooth non-turbulent body design, have proven to be outstanding in resisting the erosion effect of abrasive media, providing low pressure drop and high flow characteristics.

### Unlined Bodies

Material	Connection	Standard	Material Grade	Size	Temperature
Cast Iron	Screwed	BS EN1561	GJL-250	DN15-DN50	-10°C to 175°C
	Flanged			DN15-DN350	
SG Iron <sup>1</sup>	Screwed	BS EN1563	GJS-450-10	DN8-DN50	-10°C to 175°C
	Flanged		GJS-400-18 <sup>1</sup>	DN15-DN350	
Gun Metal	Screwed	BS EN1982	CC491K-GS	DN15-DN50	-30°C to 175°C
	Flanged		CC492K-GS	DN15-DN100	
Stainless Steel	Flanged	BS EN10283	1.4408 <sup>2</sup>	DN15-DN250	-30°C to 175°C

<sup>1</sup> For some sizes GJS-400-18-LT grade is available with a low temperature limit of -20°C

<sup>2</sup> Replaces the standard BS3100 316C16

Standard material grade fasteners:

Stainless steel fasteners - All stainless steel, plastic lined and glass lined valves

Aluminium Bronze fasteners - Gunmetal flanged valves

Carbon Steel fasteners - All remaining valves.

Special material grade fasteners available upon request

The flexible diaphragms ensure consistent leak tightness even when solids, powders and dry media are present. The wide range of lining materials make the valve suitable for many corrosive/abrasive applications up to a maximum pressure of 10 bar.

### Lined Options - Flanged Bodies Only

Lining	Body Material	Size	Temperature
Butyl (Isobutylene Isoprene)	Cast Iron	DN25-DN350	-10°C to 110°C
	SG Iron		-10°C to 110°C
	Cast Steel		-30°C to 110°C
Neoprene (Polychloroprene)	Cast Iron	DN25-DN350	-10°C to 105°C
	SG Iron		-10°C to 105°C
	Cast Steel		-30°C to 105°C
HRL (Hard Natural Rubber)	Cast Iron	DN25-DN350	-10°C to 85°C
	SG Iron		-10°C to 85°C
	Cast Steel		-30°C to 85°C
SRL (Soft Natural Rubber)	Cast Iron	DN25-DN350	-10°C to 85°C
	SG Iron		-10°C to 85°C
	Cast Steel		-30°C to 85°C

Glass	Cast Iron	DN15-DN150	-10°C to 175°C
-------	-----------	------------	----------------

### Glass Lining

Used in many different applications, including strong acids, salts and halogenated gases. Superior corrosion and abrasion resistance within a wide range of temperatures and concentrations. Note that glass is not suitable for applications where thermal cycling occurs. (Blue)

### Rubber Lining

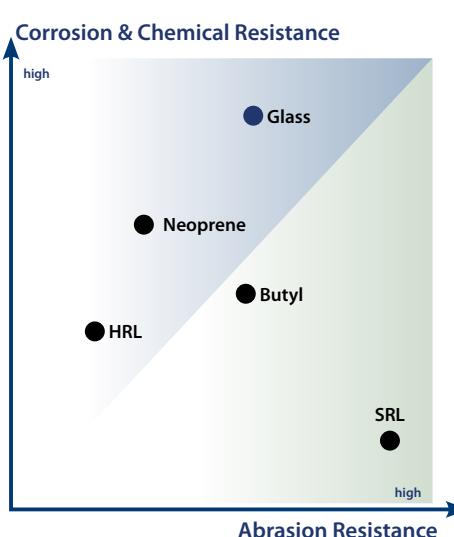

**HRL Hard Natural Rubber** — Used for salts in water, diluted acids, de-ionised water, plating solutions and potable water. HRL has better chemical resistance than SRL. (Black)

**SRL Soft Natural Rubber** — High abrasion resistance on powders, abrasive slurries, clays, coal dust, dry fertilizers, gypsum, as well as titanium dioxide and sewage. (Brown)

### Rubber Lining

**Butyl Isobutylene Isoprene** — Great for corrosive and abrasive slurries, and acidic slurries. Additional applications are salts in water, dilute acids and alkalis, and lime. WRAS approved. (Black)

**Neoprene Polychloroprene** — Perfect solution for a combination of abrasive slurries containing hydrocarbons, sludge oils and also sea water. (Black)

The temperature ranges above are given for general reference purposes only. Service conditions, such as media being handled and concentration of solids will determine the highest possible working temperature. Additionally, the performance of the valve will also depend on the diaphragm material.

The nominal bore thicknesses of Saunders<sup>®</sup> linings range from 1 to 5.5 mm, depending on lining material and valve size: glass 1 mm, rubber 2-4.5 mm and plastic 4-5.5 mm.

## KB TYPE – DIAPHRAGM

### Diaphragm

Many factors can accelerate the aging of polymer compounds. Temperature and abrasion have a significant impact on the effect of chemicals on rubber compounds. At Saunders®, we are proud of our core competence, the in-house manufacture of Saunders® diaphragms. Our expertise in polymer science assures the best range of diaphragms to suit the most challenging duties with total security. This explains why Saunders® diaphragms are synonymous with longer life, reduced maintenance and higher plant operating efficiencies.

**Energising ribs allow efficient shut-off  
in wide-bore applications**

Rubber Diaphragm

**226** - Great solution for hydrogen at high temperature, concentrated acids , aromatics solvents, low concentrated chlorine solutions, ozone, unleaded petroleum.

**300** - Chemicals, diluted acids and alkalis, drinking water. Additional abrasive applications like phosphoric acid with low concentration. FDA, USP and WRAS approved<sup>1</sup>.

**HT** - Suitable for abrasive slurries containing hydrocarbons.

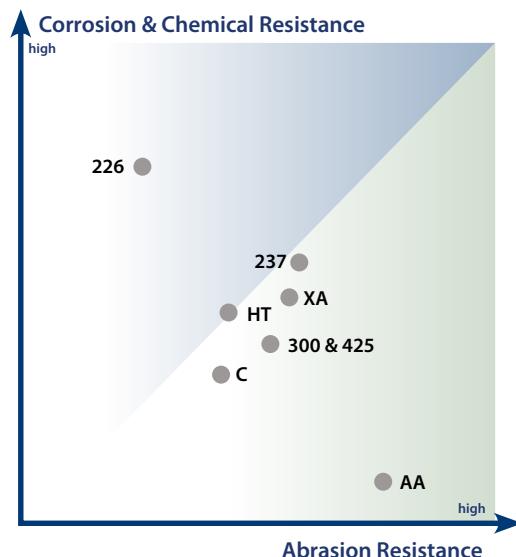

**425** - Salts in water, acids and alkalis, ozone, water, intermittent steam. Great solution for food and beverages applications. FDA and USP approved<sup>1</sup>.

**237** - The best solution for sodium hypochlorite. Great with strong acids and low concentration chlorine gas. It is also oil resistant.

**XA** - Specifically designed for both abrasive and corrosive application such as phosphoric acid, metal treatment and mining applications.

**C** - Lubricating oil, cutting oils, paraffin, animal vegetable oils and aviation kerosene at low temperatures.

**AA** - Excellent choice on abrasive applications such as slurries. The diaphragm has a light brown colour, and is sulfur cured.

### KB Type Diaphragm

Diaphragm	Composition	Size	Temperature
425	EPM (Ethylene Propylene)	All sizes	-40°C to 130°C
300	Butyl (Isobutylene Isoprene)	All sizes	-40°C to 130°C
237	CSM (Chlorosulfonated Polyethylene)	All sizes	-10°C to 100°C
XA	EPDM (Ethylene Propylene Diene)	All sizes	-40°C to 130°C
HT	Neoprene (Polychloroprene)	All sizes	-30°C to 100°C
226	FKM (Fluoroelastomer)	DN15-DN300	-5°C to 150°C
C	Nitrile (Butadiene Acrylonitrile)	All sizes	-20°C to 100°C
AA	Natural Rubber	All sizes	-40°C to 90°C

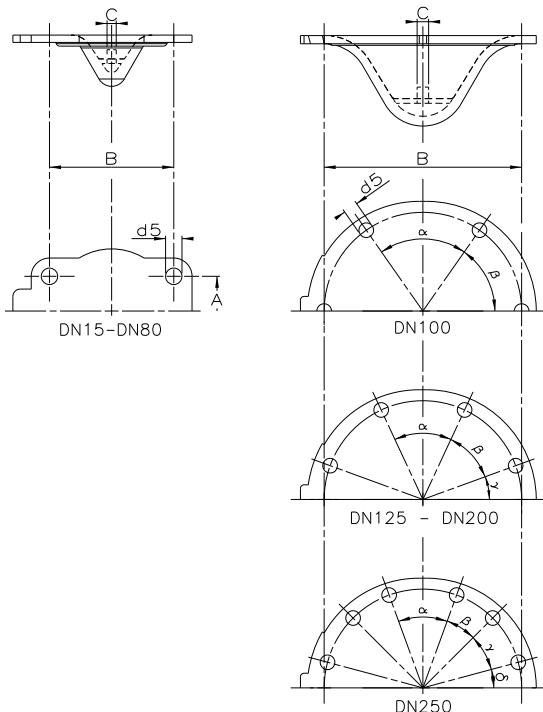

<sup>1</sup> FDA - Food and Drug Administration USP - United States Pharmacopeia

WRAS – Water Regulations Advisory Scheme

## KB TYPE – TOP WORKS

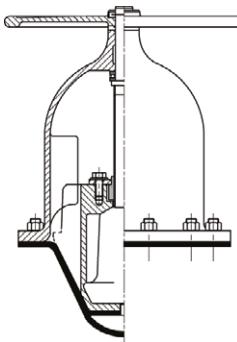

### Standard Range

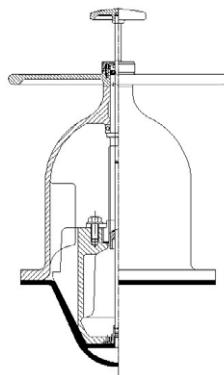

Standard plastic rising  
handwheel with indicator  
DN15 - DN50

Metal rising handwheel  
with indicator  
DN65 - DN150

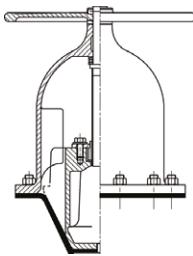

Standard non-rising  
handwheel without  
indicator  
DN200 - DN350

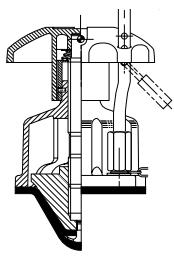

Non-rising handwheel  
with indicator  
DN200 - DN300

### High Performance

Non-rising handwheel  
(fluoroelastomer sealed)  
DN15 - DN300

Rising handwheel with  
indicator  
(simple padlocking)  
DN15 - DN150

## KB TYPE – PRESSURE AND TEMPERATURE LIMITS

Maximum manual working pressures for Saunders® KB type diaphragm valves.

For actuated valves, please refer to the appropriate datasheets.

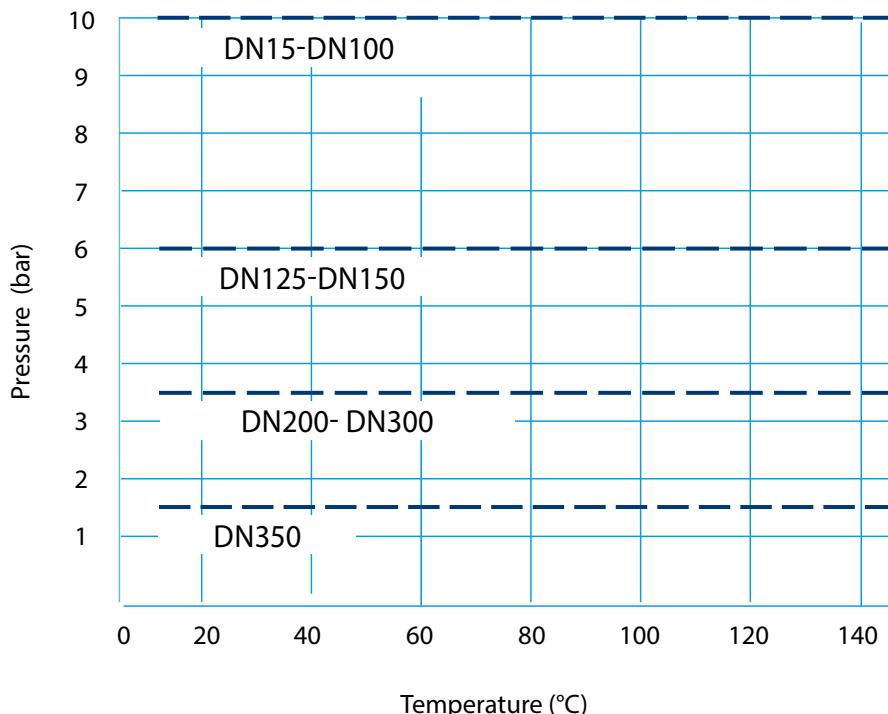

### Bonnet pressure limits

	Size (DN)	8	10	15	20	25	32	40	50	65	80	100	125	150	200	250	300	350
	Handwheel																	
Pressure (bar)	Rising	10	10	10	10	10	10	10	10	10	10	10	10	6	6	-	-	-
	Non-rising	-	-	-	-	-	-	-	-	-	-	-	-	-	3.5	3.5	3.5	1.5

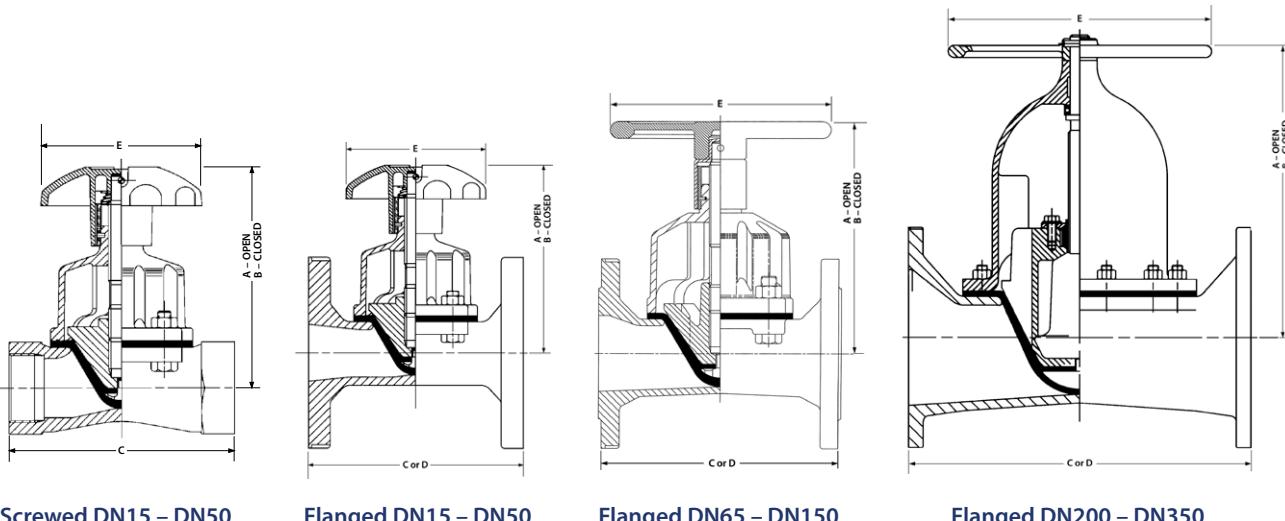

All Saunders® valves are pressure tested in accordance with BS EN12266-1 standard.

- Shell test: 1.5 times maximum working pressure
- Seat test: 1.1 times maximum working pressure

**Cv** = flow in US gal/min through a valve of  $\Delta P = 1$  psi

**Kv** = flow in  $m^3/\text{hr}$  through a valve of  $\Delta P = 1$  bar

$$1.156 \text{ Kv} = \text{Cv}$$

<sup>1</sup> Glass lining is typically available in the size range DN15 - DN150 for KB Type valves. Contact Saunders® for further requirements.

**Note:**

The flow coefficient provides a measure of the flow of a valve. It is defined as the volume flow of water at a controlled temperature and a given pressure drop across the valve. This coefficient allows engineers to compare flow capacities of valves of different sizes, types and manufacturers.
